

Michigan voters support 60 mpg

According to a new poll of likely voters in Michigan, support for a 60 mile per gallon national fuel economy standard is overwhelming, strong, and robust.

Voters don't believe rhetoric that higher standards costs jobs or hurt US auto makers. In fact, they believe 60 mpg will spur innovation and create jobs, reduce pollution and lessen our dependence on foreign oil. Support comes from across the political spectrum, and remains strong even when potential costs are noted.

As industry and government agencies come together to develop passenger vehicle fuel economy and greenhouse gas emission standards for the years 2017-2025, it is important to note that Michigan voters overwhelmingly support a 60 mpg fuel efficiency standard by 2025, as well as tougher pollution controls.

A poll of likely Michigan voters confirms overwhelming support for national standards requiring more fuel-efficient vehicles

A critical issue for voters: 87% of Michigan voters say it is "important" or "very important" to take action now to increase fuel efficiency
